## **Frequentis USA, Inc. achieves full operations capability of the Communications Subsystem for the PEACE PANORAMA System II program as a sub-contractor to TRW Systems**

**FREQUENTIS USA, Inc. provides voice switching equipment for civil Air Traffic Control (ATC), military Air Defense, Maritime Search and Rescue (SAR), and Public Safety requirements. The company is a leader in new communication technology development and complex network management methodologies.**

Frequentis USA, Inc. has successfully achieved full operation capability of the Communications Subsystem for the PEACE PANORAMA II (PPS-II) upgrade program. The subsystem provides for multiple users to have access to three types of ground to ground links and four types of ground to air to ground links as well as operator to operator voice connectivity within the system. The communications sub-system provides military and civil communication interfaces to the Fuerza Aerea Colombiana and the US Joint Southern Surveillance & Reconnaissance Operation Center (JSSROC).

Robert Pfister, President of Frequentis USA, Inc. stated: " PPS-II is our first step in a plan to become a trusted source of communications technology for the United States DoD. This initial operation success validates our belief that our 3020 Voice Communications Switch (VCS) provides the power and flexibility required for critical military Command and Control (C2) systems."

Prime contractor TRW Systems of Boulder Colorado made the selection of FREQUENTIS USA, Inc. on September 28, 2001. The PPS-II prime contract was issued by Hanscom AFB, Electronic Systems Division.
