## **FREQUENTIS solidifies its presence in the Caribbean and Latin American region with ten DIVOS recording systems for Peru**

**With DIVOS recording systems for the Airports of Tingo Maria, Anta-Huaraz, Atalaya, Yurimaguas, Chachapoyas, Ayacucho, Cajamarca, Talara, Huanuco and Andahuaylas Frequentis obtains its second win in the country of Peru after the successful signing of a Voice Communication System for the ATC Tower in Cuzco in 2002.**

This marks the entry of Frequentis Voice Recording Solutions into the Peruvian market as result of a long public tender process. With the acceptance of the contract award, Frequentis can now provide the Peruvian Air Traffic Control field with its strongly reliable and state of the art DIVOS system.

For this multi-airport success, Frequentis offered a DIVOS 3 log Voice Recording System to be used for Air Traffic Control by CORPAC, the Peruvian air navigation service provider, in the previously mentioned airports. The strong reputation of Frequentis as a company with highly dependable systems along with a detailed market insight of the Caribbean and Latin American (CALA) region served as a big advantage for this win. CALA Area Sales Manager Guillermo Galarza relies on a strong network of team members that helps to make the work in the region possible. "I am happy to work with such dedicated and passionate people in my region. This is great way to continue to extend the DIVOS systems into the CALA market".

Frequentis is an international supplier of communications and information systems in the fields of Air Traffic Management (civil and military air traffic control) and Public Safety&Transport (police, rescue and fire services, coastal rescue, railways, shipping). As a Frequentis client, CORPAC S.A., Peru can now utilize the same technologies that are currently in use in many countries worldwide.

### **Frequentis DIVOS log – The integrated Voice and Data Recording Solution**

DIVOS log provides reliable, orderly and complete recording of both voice and data and complies with the critical requirements in Air Traffic Control. Excellent security functions guarantee manipulation-free audio recordings for any legal purpose. The integration with Frequentis voice communication systems like the VCS 3020X increases the availability and functionality.
