

## **Saudi Air Navigation Services (SANS) selects FREQUENTIS for mobile tower solution**

**The Saudi Air Navigation Services Co. (SANS) has chosen Frequentis to provide a deployable mobile tower to support its air traffic control (ATC) modernisation program. Initially one mobile tower container will be provided, allowing SANS the flexibility to operate the mobile tower as a contingency solution or during any update work.**

The mobile tower for SANS will include the Frequentis Voice Communication System, VCS3020X, and provide integration with legacy systems. Operator working positions will be mounted on the mobile tower consoles and the system will have a capacity for 72 voice channels.

“We are pleased to be working with SANS again, supporting them in their goals for modernised tower services. Mobile tower containers allow ANSPs to operate a temporary tower solution if a regular ATC tower is undergoing maintenance or repair, saving passenger disruption, it also provides a contingency solution if required.”, says Hannu Juurakko, Frequentis Vice President ATM Civil.

Frequentis is currently replacing the existing voice communication systems at Saudi Arabian air traffic control centres in Riyadh and Jeddah with its VCS3020X to enhance Air Traffic Services. With the addition of a deployable mobile tower SANS will increase the flexibility of their air traffic services during its modernisation.

Shipment of the mobile tower is planned for August 2019. Integration will be carried out by Frequentis’ partner in the region, Nudhum Al-Oula and Twist, Frequentis’ French solution partner.

**Frequentis will be exhibiting at Airport Show Dubai, April 29 to May 1, 2019.**
