
FREQUENTIS supplies Police of Lower Saxony with LifeX multimedia communication solution

- **The Central Police Directorate (ZPD) of Lower Saxony to modernise its control room communication solution**
- **Frequentis will provide its future-oriented communication and collaboration platform, 3020 LifeX**

Police and local authorities in Lower Saxony, represented by ZPD, have commissioned Frequentis to supply its multimedia communication solution 3020 LifeX. The implementation of this system across eight control centres, one alternate control centre and one test system will take place in three phases.

The project will establish a state-wide standard for the control centre communication system within an IP-based system environment in Lower Saxony.

"Over the course of modernising the police and cooperative control centres in Lower Saxony, one of the main requirements, among other things, was updating the communication system, as an essential technical component. Against the background of many years of good experience with the predecessor system, Frequentis ICCS 3020, in the state, the special challenges with regard to a long-term migration phase from the old to the new system, as well as the fulfilment of future multimedia communication requirements, we opted for the Frequentis successor system, 3020 LifeX," says Marc Stothfang, Project Lead, Operations Control System Lower Saxony (ELS NI). "With this, Lower Saxony has a reliable communication system with almost identical and extensive functional features at its disposal at all times, even during parallel operation, which provides the control centres with maximum technical performance, especially in view of the current security situation."

The existing Frequentis Integrated Command and Control Solution (ICCS 3020), in operation for more than ten years, will be replaced by the next generation of Frequentis communication systems. Furthermore, it will realise the operational system interconnection of the control centres and enable interaction in case of overload or failure.

"The decision of the State of Lower Saxony to choose the Frequentis state-of-the-art LifeX multimedia communication system for its modernisation confirms the innovative approach we have taken during the development. The long-standing partnership between the State of Lower Saxony and Frequentis will be continued and together we will provide the control centre operations with further new functions to meet future requirements," says Robert Nitsch, Frequentis Vice President Public Safety.

Police Vice President, Uwe Lange, and Frequentis Vice President Public Safety, Robert Nitsch

About FREQUENTIS

Frequentis is a global supplier of communication and information systems for control centres with safety-critical tasks. The listed family company develops and markets its “control centre solutions” in the Air Traffic Management segment (civil and military air traffic control, air defence) and the Public Safety & Transport segment (police, fire brigades, emergency rescue services, coastguards, port authorities, railways). With a market share of 30%, Frequentis is the world market leader in voice communication systems for air traffic control. Frequentis is also the global leader in aeronautical information management and aeronautical message handling systems.

As a global player with around 2,000 employees (full-time equivalents/FTE), Frequentis has a global network of companies in more than 50 countries. Its head office is in Vienna, Austria. Frequentis' products, services, and solutions are used at more than 40,000 operator working positions in around 150 countries. Shares in Frequentis are traded on the Vienna and Frankfurt stock exchanges; ISIN: ATFREQUENT09, WKN: A2PHG5. In 2021, revenues were EUR 333.5 million and EBIT was EUR 29.0 million.

Wherever Frequentis' systems are used, safety-critical operators bear responsibility for the safety of other people and goods. The company also works towards a more sustainable future through its air traffic optimisation solutions.
