
FREQUENTIS reinforces MCX leadership by taking majority ownership of Nemergent and deepening partnership with Lyfo

- **Demonstrates long-term commitment and reliability in the mission-critical communications (MCX) market**
- **Nemergent's MCX technology is already the core component of Frequentis MissionX platform, reinforcing proven integration and maturity**
- **Lyfo's patented multi-network switching enhances seamless service continuity, even during mobile network outages**
- **The enhanced MissionX ecosystem will accelerate innovation and deliver significant benefits for next-generation mission-critical broadband solutions**

Frequentis is taking two significant steps to reinforce its position as a long-term, trusted provider in the mission-critical communications market: taking shareholder majority in Nemergent Solutions S.L., Spain, to a 51% majority in July 2026 (from currently 25%) and deepening its strategic partnership with Lyfo B.V., Netherlands.

Together, these initiatives substantially strengthen the resilience, capability, and operational readiness of the MissionX ecosystem, delivering enhanced value to customers across public safety, public transport, critical infrastructure, defence, and many more industries with mission critical or business critical communication needs.

“These partnerships underline our commitment to a best-in-class MCX ecosystem. Customers can rely on Frequentis for long-term stability, innovation, and operational excellence. They also confirm our readiness to support large-scale rollouts, including FRMCS railway programs and nationwide mission-critical networks for public safety agencies, delivering a future-proof, interoperable, and fully European stack,” says Manuel Hintermayr, Frequentis Director Mission Critical Services.

Frequentis' long-standing collaboration with Nemergent and Lyfo already spans almost a decade, including joint contributions to the BroadWay programme, BroadPort, and the development of today's EUCCS (European Critical Communication System / BroadEU.Net). Nemergent's technology is a core pillar of Frequentis MissionX, strengthened by years of close engineering collaboration that accelerates the delivery of advanced capabilities to mission-critical operators.

“Our established partnership with Frequentis reflects a shared commitment to advancing mission-critical communications in Europe. Over the years, we have combined our expertise to deliver innovative MCX solutions with a strong focus on standards compliance and proven interoperability with major vendor technologies. Becoming a majority-owned part of the Frequentis Group marks an important milestone, enabling us to scale our technology further and jointly support customers with a fully European, future-proof MCX ecosystem,” says José Oscar Fajardo, CEO of Nemergent.

The strategic cooperation between Lyfo and Frequentis is further tightening, building on the hands-on integration of Lyfo’s patented multi-network switching technology. This delivers immediate customer value by significantly enhancing resilience and ensuring uninterrupted connectivity – critical in operations where downtime is not an option.

Customers preparing for next-generation mission-critical broadband will benefit from the enhanced MissionX ecosystem, combining proven standards compliance, seamless multi-network connectivity, and a fully European technology stack to ensure maximum reliability, operational continuity, and long-term investment protection.

About Nemergent

Nemergent Solutions S.L., headquartered in Bilbao, Spain, is an expert in 3GPP-based technologies, specializing in solutions for mission-critical communications. The company focuses on designing, integrating, and delivering advanced communication software that enable secure, reliable, and high-performance connectivity for public safety agencies, critical infrastructure operators, and enterprise clients. It has strong collaborations with global industry partners and standardization bodies to advance the evolution of standards-based mission-critical communications worldwide.

About Lyfo

Lyfo B.V., based in Geldermalsen, Netherlands, specialises in global mobile connectivity and provides solutions for uninterrupted communication. With Lyfo.net and patented multi-network SIM/eSIM technology, Lyfo ensures that high-end demand of mission-critical and business critical users worldwide are always connected to the best available network with maximum reliability.

About Mission X

MissionX is an integrated, end-to-end solution based on Mission Critical Services (MCS/MCX) as defined by 3GPP, which reliably ensures safety-critical multimedia communication over public, Based on standard 4G/5G mobile networks, multimedia safety-critical data services will support crucial features, such as situational awareness, position tracking, distribution of images or live video streams. Multimedia can be received and shared securely by first responders from any authority thanks to MissionX providing high-level interoperability, connecting even with third-party systems. MissionX has the potential to provide efficient support to decision-making processes in the field as well as in control centres during an incident.

For high-priority, interoperable, reliable and secure data exchange over standard 4G/5G mobile networks, MissionX implements the international standards of 3GPP (3rd Generation Partnership Project). See <https://www.frequentis.com/en/innovation/mission-critical-communication>.

About FREQUENTIS

Frequentis stands for a safer world. Our solutions are used in our customers' command and control centres to help them make the world safer.

Frequentis is a world leader in high-tech solutions for Air Traffic Management, supporting both civil and military air traffic control organisations, as well as Public Safety and Transport, where police, emergency rescue services, fire brigades, railways, coastguards, and port authorities rely on our extensive portfolio.

The listed family business based in Vienna, Austria, drives innovative and sustainable solutions for safety and security in everyday life and in the safety-critical sector. Its air traffic optimisation solutions for air traffic control centres are contributing to reducing emissions.

As a global player with more than 2,600 employees (full-time equivalents/FTE), Frequentis has a worldwide network of companies in over 50 countries. Its products, services, and solutions are used in around 150 countries. Shares in Frequentis are traded on the Vienna and Frankfurt stock exchanges; ISIN: ATFREQUENT09, WKN: A2PHG5. In 2025, revenues were EUR 580 million and EBIT was EUR 47 million.
