
EUROCONTROL awards FREQUENTIS new long-term contract to advance European air traffic surveillance

- **EUROCONTROL has awarded Frequentis a new long-term contract as industrial partner for Europe's leading air traffic management surveillance tracker and server (ARTAS)**
- **Around 90% of Europe's daily flights receive high-performance surveillance from ARTAS**
- **The contract marks 25 years of partnership driving innovation in air traffic surveillance**

Building on a partnership that has shaped European air traffic surveillance, EUROCONTROL has awarded market-leading surveillance expert, Frequentis, the fifth Industrial Partner contract for centralised ARTAS maintenance and operational support (CAMOS VI IP) for continued evolution until 2031.

[ARTAS](#) is Europe's leading multi-sensor tracker. At the heart of modern air traffic surveillance, a tracker integrates data from multiple surveillance sources and technologies into a single, coherent, and accurate air traffic picture for controllers. Developed by EUROCONTROL on behalf of its member states, ARTAS is the most widely deployed tracker in Europe, supporting around 90% of European daily flight movements with more than 50 operational installations.

Since becoming EUROCONTROL's industrial partner in 2001, Frequentis has worked alongside EUROCONTROL to continuously maintain, support, and evolve ARTAS. The partnership has contributed to the development of one of the world's most advanced surveillance data processing systems, supporting the evolving demands of European air traffic management (ATM) while ensuring high levels of safety, reliability, and operational performance.

"CAMOS plays a vital role in the ongoing evolution of ARTAS, providing software support, continuous maintenance, and the enhancements needed to meet the evolving requirements of our user community," says Antonio Principe, EUROCONTROL ARTAS and SDDS Services Manager.

"Frequentis has been a trusted industrial partner, helping to advance ARTAS alongside EUROCONTROL. CAMOS VI builds on this successful collaboration, ensuring the system continues to meet the future needs of European air traffic management."

"The award of CAMOS VI is much more than a contract extension. It reflects 25 years of trust, collaboration, and shared innovation," says Josef Kutschi, Managing Director of Frequentis Comsoft.

"Together with EUROCONTROL, we have continuously evolved ARTAS to meet the changing needs of European air traffic management. We are proud to continue this journey until 2031, bringing our surveillance expertise to support customers with a solution that remains at the forefront of surveillance technology."

About FREQUENTIS

Frequentis stands for a safer world. Our solutions are used in our customers' command and control centres to help them make the world safer.

Frequentis is a world leader in high-tech solutions for Air Traffic Management, supporting both civil and military air traffic control organisations, as well as Public Safety and Transport, where police, emergency rescue services, fire brigades, railways, coastguards, and port authorities rely on our extensive portfolio.

The listed family business based in Vienna, Austria, drives innovative and sustainable solutions for safety and security in everyday life and in the safety-critical sector. Its air traffic optimisation solutions for air traffic control centres are contributing to reducing emissions.

As a global player with about 2,900 employees (full-time equivalents/FTE), Frequentis has a worldwide network of companies in over 50 countries. Its products, services, and solutions are used in around 150 countries. Shares in Frequentis are traded on the Vienna and Frankfurt stock exchanges; ISIN: ATFREQUENT09, WKN: A2PHG5. In 2025, revenues were EUR 580 million and EBIT was EUR 47 million.

About FREQUENTIS Comsoft

In 2016, Frequentis Comsoft joined the Frequentis Group as its competence centre for AMHS, AIM, surveillance technologies and ATM systems. Frequentis Comsoft, based in Germany, provides software-centric solutions covering a major part of the surveillance data chain: from distribution to processing to display.
